Assembly Guide

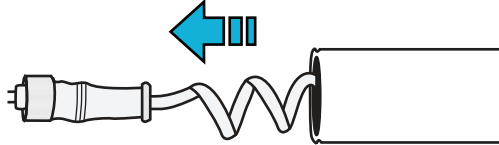

For more information on the contents of the manual, or for questions regarding Stella Lighting products, please give us a call or visit our website.

Assembly Instructions

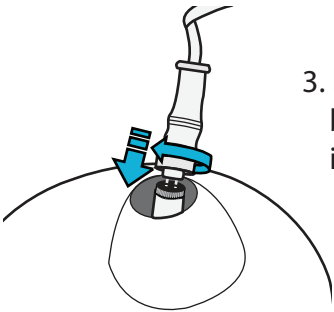

1. Remove base and pole components from packaging.

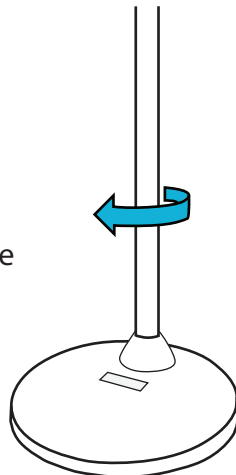

2. Pull 2-pin power connector from inside pole.

3. Insert pins into female connector located in base and secure the connection by tightening the rotating collar.

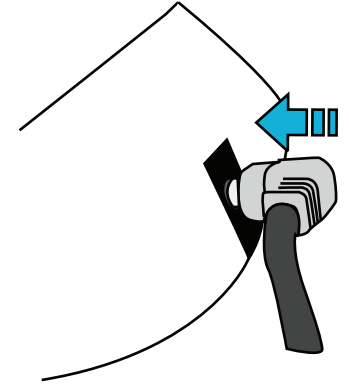

4. After securing the 2-pin connection, push the excess cord back inside the pole and begin attaching the pole to the base of the lamp. To do so, insert pole into base and turn clockwise.

5. Once the pole is securely attached to the base of the lamp, assembly is complete.

6. To begin using the lamp, simply remove power adapter from its box and plug into the back-side of the base. Plug adapter into an outlet.

7. Remove remote control from packaging and pull the plastic tab to activate battery.

8. Store remote by placing it anywhere on the small pole of the lamp. Magnets inside the remote allow for placement anywhere on the smaller metal pole.

9. To adjust the height of the lamp, simply loosen rotating collar on the lamp pole, and adjust as needed. Once you have reached the desired height, tighten rotating collar to prevent the pole from moving.
